

Hill School COVID-19 Student Decision Tree

Symptoms according to the CDC

- ◆ Fever or chills
- ◆ Cough
- ◆ Shortness of breath or difficulty breathing
- ◆ Fatigue
- ◆ Muscle or body aches
- ◆ Headache
- ◆ New loss of taste or smell
- ◆ Sore throat
- ◆ Congestion or runny nose
- ◆ Nausea or vomiting
- ◆ Diarrhea

Symptom onset is the first day that you develop ANY of to above listed symptoms.

If you have muscle or body aches but nothing else is bothering you, that is the first day of symptom onset.

Every day before coming on campus, we ask that you complete your student questionnaire. Is your temperature above 100 degrees or do you have any of the symptoms above?

If no, come to school and practice the safety protocols we have implemented. Be safe and be smart.

If yes, do not come to school. Self-isolate from others; contact your health care provider; email Health@HillSchool.org to report your symptoms. Call Michelle Frantz to report an absence.

Exposure to COVID-19: Has your student had close contact with someone who has tested positive?

What is a close contact? Someone who:

- Lives in the same household OR
- Cares for a person sick with COVID-19 OR
- Has been within 6' of a person sick with COVID-19 for 15 minutes or longer OR
- Has been in direct contact with secretions from a person sick with COVID-19

If no, come to school and practice the safety protocols we have implemented. Be safe and be smart.

If yes, do not come to school. Stay at home for 14 days from the time of contact with the person who tested positive; contact your health care provider; email Health@HillSchool.org to report your exposure. Call Michelle Frantz to report an absence.

Has your student been tested for Covid-19?

If your student's results were **positive** and he/she has symptoms, stay at home for 10 days beginning the day after the positive test. Your student may return to school after those 10 days, is 24 hours fever-free (without fever-reducing medicine) and symptoms are improving. Email Health@HillSchool.org to report your student's test results. Call Michelle Frantz to report an absence.

If your student's results were **negative** and he/she is **symptom-free**, your student may return to school.

If your student's results were **negative** but he/she has **symptoms**, you may return to school after a repeat COVID-19 test is negative and 24 hours since fever (without fever-reducing medicine) and your symptoms are improving.

Questions or Concerns You May Have

Your student has had a headache recently or a sore throat but he/she has seasonal allergies. COVID-19 symptoms are similar to allergies or a cold. You know your student best. If his/her allergy or cold symptoms persist, you may want to have your student tested to rule out COVID-19. Contact your health care provider for advice.

Your student has just learned that he/she has been exposed to COVID-19. Now what? If your student has had close contact with a person who is COVID-19 positive, he/she will need to quarantine at home for 14 days while monitoring symptoms.

Your student is experiencing COVID-19 symptoms, but does not have test results. Now what? Your student will need to stay at home to recover for a minimum of 10 days after onset of symptoms and is also fever-free for 24 hours (without fever-reducing medicine) and the symptoms have improved.

Someone in your student's household is showing symptoms but does not yet have COVID-19 test results. Now what? As long as your student is not showing symptoms, his/her classmates/teammates do not need to quarantine. However, your student will need to quarantine. The student's classroom will be cleaned and disinfected. Your student may return to school once the family member receives a negative COVID-19 test as long as the student remains symptom-free. If the family member does not get tested, your student must quarantine for 14 days from the day that the ill family member recovers.

Someone in your student's household has tested positive for COVID-19. Now what? Your student will need to quarantine for 14 days after the positive test. During this time, continue to monitor symptoms and submit the daily questionnaire. If your student does not develop symptoms during the 14 days, he/she may return to school. If your student develops symptoms during the 14 days, the student should be tested to rule out a positive. However, if your student tests positive, your student needs to quarantine for 10 days after the positive test. Additionally, your student cannot return until he/she is fever free (without fever-reducing medicine) for 24 hours.

Someone in your student's class is experiencing COVID-19 symptoms. Now what? If your student has maintained 6' distance from the classmate while wearing a mask, your student does not need to leave campus.

Someone in your student's class was exposed to COVID-19. Now what? The exposed student will need to stay at home for 14 days from the last date of contact with the positive person and monitor for symptoms. If your student has maintained 6' distance from the exposed classmate while wearing a mask, your student does not need to leave campus.
