

Hill School COVID-19 Student Decision Tree

Symptoms according to the CDC

- ◆ Fever or chills
- ◆ Cough
- ◆ Shortness of breath or difficulty breathing
- ◆ Fatigue
- ◆ Muscle or body aches
- ◆ Headache
- ◆ New loss of taste or smell
- ◆ Sore throat
- ◆ Congestion or runny nose
- ◆ Nausea or vomiting
- ◆ Diarrhea

Symptom onset is the first day that you develop ANY of the symptoms listed above.

If you have muscle or body aches but nothing else is bothering you, that is the first day of symptom onset.

Every day before coming on campus, we ask that you complete your student questionnaire. Is your temperature above 100 degrees or do you have any of the symptoms above?

If no, come to school and practice the safety protocols we have implemented. Be safe and be smart.

If yes, do not come to school. Self-isolate from others; contact your health care provider; email Health@HillSchool.org to report your symptoms. Call Michelle Frantz to report an absence.

Exposure to COVID-19: Has your student had close contact with someone who has tested positive?

What is a close contact? Someone who:

- Lives in the same household OR
- Cares for a person sick with COVID-19 OR
- Has been within 6' of a person sick with COVID-19 for 15 minutes or longer OR
- Has been in direct contact with secretions from a person sick with COVID-19

If no, come to school and practice the safety protocols we have implemented. Be safe and be smart.

If yes, do not come to school. Stay at home to quarantine. Quarantine can end after Day 10 without testing and if no symptoms have been reported during daily monitoring. Quarantine may be shortened to 7 days if a negative test occurs on or after day 5 from your time of contact with the person who tested positive. Contact your health care provider; email Health@HillSchool.org to report your exposure.

Has your student been tested for Covid-19?

If your student's results were **positive** and he/she has symptoms, per the CDC guidelines, stay at home for the 10 day quarantine, beginning the day symptoms first appeared. Email Health@HillSchool.org to report your student's test results. Call Michelle Frantz to report an absence. If he/she is feeling well enough to transition to remote learning, let us know and the Dean of Academics will develop a remote learning plan for your student.

Your student may return to school after those 10 days, if he/she is 24 hours fever-free (without fever-reducing medicine) and symptoms are improving.

If your student's results were **negative** and he/she is **symptom-free**, your student may return to school.

If your student's results were **negative but he/she is symptomatic**, your student may return to school after a second COVID-19 test is negative, if 24 hours since fever (without fever-reducing medicine) and their symptoms are improving.

Questions or Concerns You May Have

Your student has had a headache recently or a sore throat, but he/she has seasonal allergies.

COVID-19 symptoms are similar to allergies or a cold. You know your student best. If his/her allergy or cold symptoms persist, you may want to have your student tested to rule out COVID-19. Contact your health care provider for advice.

Your student has just learned that he/she has been exposed to COVID-19. Now what?

If your student has had close contact with a person who is COVID-19 positive, he/she will need to quarantine at home. Quarantine can end after day 10 without testing and if no symptoms have been reported during daily monitoring. Quarantine may be shortened to 7 days if a negative test occurs on or after day 5.

Your student is experiencing COVID-19 symptoms, but does not have test results. Now what?

Your student will need to stay at home to recover for a minimum of 10 days after onset of symptoms. Your student may return to school when he/she is fever-free for 24 hours (without fever-reducing medicine) and their symptoms have improved, or if your healthcare provider clears the student of COVID-19.

Someone in your student's household is showing symptoms but does not yet have COVID-19 test results. Now what?

As long as your student is not showing symptoms, his/her classmates/teammates will not need to quarantine. However, your student will need to quarantine. The student's classroom will be cleaned and disinfected. Your student may return to school once the family member receives a negative COVID-19 test as long as the student remains symptom-free. If the family member does not get tested, your student must quarantine for 10 days from the day that the ill family member recovers.

Someone in your student's household has tested positive for COVID-19. Now what?

Your student will need to quarantine for 10 days from your time of contact with the COVID-19 positive individual. During this time, continue to monitor symptoms and submit the daily questionnaire. If your student does not develop symptoms during the 10 days, he/she may then return to school. Quarantine may be shortened to 7 days if a negative test occurs on or after day 5. If your student develops symptoms during those 10 days, he/she should be tested to determine a COVID-19 diagnosis. If your student tests positive, your student needs to quarantine for at least 10 days. Additionally, your student cannot return to school until he/she is fever free (without fever-reducing medicine) for 24 hours.

Someone in your student's class is experiencing COVID-19 symptoms. Now what?

If your student has maintained 6' distance from the classmate while wearing a mask, your student does not need to leave campus.

Someone in your student's class was exposed to COVID-19. Now what?

The exposed student will need to stay at home to quarantine for 10 days from the last date of contact with the positive person and monitor for symptoms. If your student has maintained 6' distance from the exposed classmate while wearing a mask, your student is considered an indirect contact and does not need to leave campus.
